

GALAXY JARS

MATERIALS NEEDED

- Clear or semi-clear bottle
- Cotton
- Glitter
- Food Coloring
- Long Wooden Sticks (or straws)

ESTIMATED TIME: 10-20 min

STEPS

1. Fill your bottle halfway with cotton balls. Smush them down with the wooden sticks.
2. Then fill it with water, just enough so the cotton balls absorb it.
3. Pour 2-3 drops of your food coloring in the bottle.
4. The food coloring should start mixing with the water, if it doesn't, try mixing it with the wooden sticks.
5. Then pour some glitter inside, it'll look like stars!
6. Repeat steps 1-5 until finished..
7. You now have a Galaxy Jar!
8. As time goes on the bottle will start to lose some color. Add a little bit of water when it does, and that should help keep the colors bright!
